Zen UPVAT Crack With Keygen

The program is a convenient tool for the companies that need to keep track of their transactions in order to calculate the payable VAT. The database allows you to create a database with your customers, suppliers and transactions. The program enables you to keep track of your customers, suppliers, transactions and purchases for easy VAT payment. You can add a customer, supplier, purchase, order or invoice to the database. Once completed, you can create a report. The result of the report is presented in a form and the different customers/suppliers/orders/invoices/purchases can be easily selected. The program can import the VAT number and the transactions performed will be automatically added to the database. For each transaction, you can set the amount of the VAT incurred (Input VAT/Output VAT). You can also set a period of time before submitting the transaction for payment and the program will automatically create a form. After generating the report, you can save it as PDF or print it. With the PDF form, you can distribute it to the customers. The program can print the report directly or save it as PDF document.

Organizational Discount: The program has been specially created for companies of any type. If you are a sole-practitioner or a business of a small size, the program will be a useful tool for calculating the payable VAT. If your company has a greater number of employees, you will appreciate the great flexibility of the program which allows you to calculate the payable VAT for each order, invoice, purchase or transaction. Zen UPVAT is a very user-friendly program that allows you to keep track of your customers, suppliers, transactions and purchases for easy VAT payment. **Zen UPVAT Features:** Clear and easy interface Convenient and efficient database Import and export files and documents Easy and fast data entry Export to different file formats Export to PDF format for distribution Calculate and update payable VAT Printable and generated forms Auto-saving database Export to Excel Editing and updating database entries Save and export to Excel, Word, PDF, HTML and Text Customizable report system Editing and updating database entries Different modules Stability - Zen UPVAT can run on any computer with Microsoft Windows. Support - We provide support in 3 different languages: English, French and German. Our support is available to customers 24/7.

Zen UPVAT Download

To be eligible for KeyMacro, you must be a member of the EU VAT Registered Network. KeyMacro is a computerized assistance tool that makes use of macros to simplify VAT calculations. Zen UPVAT is a useful application for the companies that need to keep track of their transactions in order to calculate the payable VAT. The program allows you to create a database with your customers, suppliers and transactions. The database will be used for consolidating the VAT numbers and to generate forms and reports such as annual return or audit report. This application has two main modules, the first module is the database in which all your data are stored, the second one is the modules to generate reports. The application has the main menu option to add and to update data, to view, to generate and to print reports.

Data Fields: Here is the list of the data fields that Zen UPVAT provides with each field name and its field type. The field name is in bold and the field type is in small characters to the right of the field name. The field values are enclosed in quotes and the field name and the field type is in bold letters. Each field can be an integer, a double or a string. The list of data fields are given in the table below:

Field Name	Description	VAT ID
VAT ID	The VAT ID is the main identifier for the specific account. The VAT ID is assigned to the customer and supplier so that the transactions can be linked to the specific customer or supplier. The VAT ID is an integer value.	Integer
Main Account	The Main Account is the main account number of the customer or supplier. It is assigned to the customer and supplier to indicate the account for which the transactions can be performed. The Main Account is an integer value.	Integer
Main Account Name	The Main Account Name is the name of the main account assigned to the customer or supplier. It is a string value.	String
Main Account Code	The Main Account Code is an unique code assigned to the Main Account. The Main Account Code is a string value.	String
Main Account Manager	The Main Account Manager is the name of the manager assigned to the main account number. It is a string value.	String
